

PROJECT SUMMARY

Air Energy TCI (AET) has been progressing with the development of the proposed Hancock-Seneca Wind Farm project, near Fostoria OH (see map).

The proposal is for between 53- 88 wind turbines, generating up to 133 MW of renewable energy - enough to power around 33,000 homes - that will be fed into the Ohio state grid. The project will have a life expectancy of 25 years.

Environmental studies, which are required by the Ohio Power Siting Board as part of the permitting program, are already underway and include ecology, natural habitats, noise, archaeology, visual impact and aviation. These and other assessments are scheduled to continue until mid-2012, to complete the assessment process, while construction is currently planned for completion in December 2013.

Notice of Public Open House Hancock-Seneca Wind Farm

Tuesday October 4

5.00 pm - 8.00 pm

Arcadia Lions Community Center

301 W Brown Road

Arcadia, OH 44804

(Corner of TWP 254 and CR 216)

CONSULTATION

Development work began in the project area in 2008. Since then, AET has been working with landowners, county representatives, state and federal officials from the Ohio Department of Natural resources and the US Fish and Wildlife Service as well as other relevant stakeholders.

PUBLIC OPEN HOUSE

Everyone is welcome to the open house. It is an important component of the consultation process, where you can meet the AET team, ask questions and provide feedback. It also allows us to provide you with information about wind energy and the environmental assessment process and to show how the Crawford Wind Farm will fit into the landscape.
