

PROJECT SUMMARY

Air Energy TCI (AET) has been progressing with the development of the proposed Tupper Lake Wind Energy Project near Lake Odessa, MI (see map).

The proposal is for up to 50 wind turbines, generating up to 80 MW of renewable energy, enough to power around 22,000 homes, that will be fed into the state grid. The project will have a life expectancy of 25 years.

Environmental studies, which are a required part of the development program, have already commenced, including ecology, habitat, noise, visuals and aviation. These and other assessments are scheduled to continue until early 2012, to complete the permitting process, while construction is planned for the second quarter of the year.

Notice of Public Open House

**Tupper Lake
Wind Energy Project**

Monday October 3

5.00 pm - 8.00 pm

**Sebewa Township Hall
2975 East Bippley Road,
Portland, MI**

CONSULTATION

Development work began in the project area in 2008. Since then, AET has been working with landowners, township boards, county commissioners, roads drains and planning departments as well as state and federal officials for agriculture, aviation, natural resources, historical preservation, transport and the US Fish and Wildlife Service.

PUBLIC OPEN HOUSE

Everyone is welcome to the open house. It is an important component of the consultation process, where you can meet the AET team, ask questions and provide feedback. It also allows us to provide you with information about wind energy and the environmental assessment process and to show how the Tupper Lake Wind Energy Project will fit into the landscape.
